EXECUTIVE SUMMARY

Executive KPI Snapshot

The dashboard reports **26M** in total sales and **8M** in total profit, with a **32.52%** gross margin. The key current-period signals are **56.79%** budget achievement and **-83.45%** YoY growth.

TOTAL SALES	TOTAL PROFIT	GROSS MARGIN	TOTAL ORDERS
26M	8M	32.52%	11K
Overall sales	Overall profit	Profit as % of sales	Distinct orders

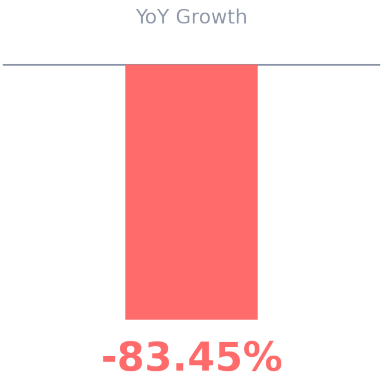

TOTAL QUANTITY	AVG ORDER VALUE	BUDGET ACHIEVED	YOY GROWTH
21K	2.36K	56.79%	-83.45%
Quantity sold	Average sales per order	Current-year actual vs budget	Current-year vs prior year

Note: findings below are based on the completed dashboard. Where the dashboard does not establish a cause, recommendations are framed as investigation / action steps rather than proven causes.

Performance at a Glance

1 Top 5 Business Findings

1 Strong overall sales and profit base

The business generated **26M** in total sales and **8M** in total profit across the analyzed dataset.

2 Gross margin is 32.52%

Gross margin provides a baseline for monitoring profitability while comparing products and other business dimensions.

3 Current-year sales show a major decline

YoY Growth is **-83.45%**, and the Sales by Year visual shows a much smaller 2023 sales bar than 2021 and 2022.

4 Budget achievement is 56.79%

Current-year actual sales are at **56.79%** of the budget benchmark used in the dashboard, indicating a material budget gap.

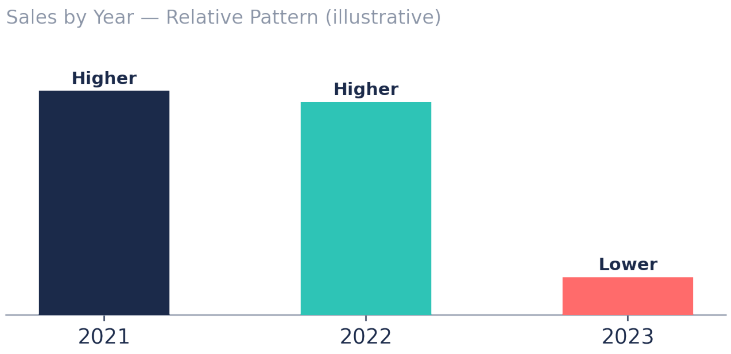

5 Performance varies across products and locations

The report provides Top 10 Products by Sales, Product Profitability Analysis, Sales by Location and Location Performance views for segment-level diagnosis.

Dashboard Evidence

AREA	EVIDENCE
Year	Sales by Year: 2021, 2022, 2023
Product	Top 10, profitability and Pareto analysis
Geography	Sales by State, Location and Location Performance
Budget	Actual vs Budget, variance and monthly comparison

2 Key Problems / Issues

A

Large year-over-year sales decline

The -83.45% YoY Growth is the clearest negative signal. The dashboard does not establish the cause, so the decline should be investigated by product, customer, location and salesperson.

B

Budget shortfall

Budget Achievement is 56.79%, showing that current-year sales have not reached the budget benchmark used in the report.

C

Need for segment-level diagnosis

Aggregate KPIs show the outcome but not the specific drivers. The detailed product, customer, salesperson and geographic pages are needed to isolate contributing segments.

D

Profitability requires continuous monitoring

The 32.52% gross margin is a useful baseline; product-level profitability should be reviewed so that sales volume is not evaluated without profit context.

3 Recommendations

1 Investigate the 2023 sales decline

Compare 2023 with prior years across products, customers, locations and salespeople to identify the specific drivers before taking corrective action.

2 Close the budget gap with monthly monitoring

Use Budget vs Actual and monthly variance views to identify periods and locations with the largest gaps and investigate their sales drivers.

3 Protect profitable sales

Use Total Profit and Gross Margin % together with sales volume when reviewing products and other segments.

4 Use rankings to focus sales effort

Use Product, Customer, Salesperson and Location Rank to identify high-value segments and areas requiring attention.

5 Establish recurring KPI reviews

Track Total Sales, Total Profit, Gross Margin %, Budget Achievement %, YoY Growth %, Total Orders and Average Order Value regularly.

4 Conclusion

The Power BI solution consolidates sales performance across time, products, customers, salespeople, locations and budget. The principal management signals are a strong overall sales/profit base, **32.52%** gross margin, **56.79%** budget achievement and **-83.45%** YoY sales growth. The next analytical priority is to identify the drivers of the current-year decline and budget gap using the report's detailed dimensions.
